

MachPanel Translation Toolkit Utility

MACHPANEL®

Revision: 1.0

MachSol Corporation, USA.

AUTOMATION IN CONTROL

Summary

This article explains how to translate MachPanel in your language using **MachPanel Translation Toolkit Utility**.

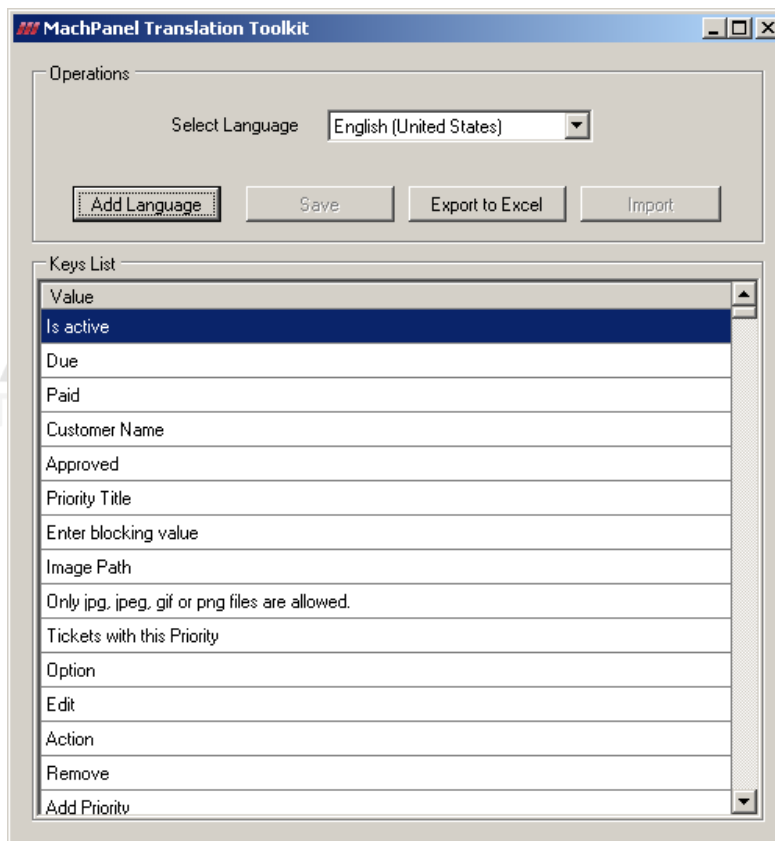

Applies To

MachPanel all versions

Solution

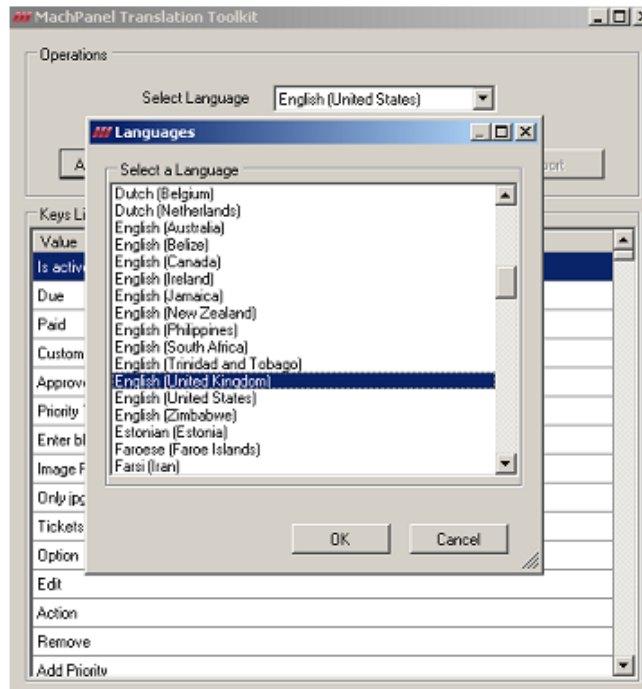

To translate MachPanel in your local language follow the steps mentioned in the attached document.

Step 1: Download the [MachPanel Translation Toolkit Utility](#) and run the downloaded executable file.

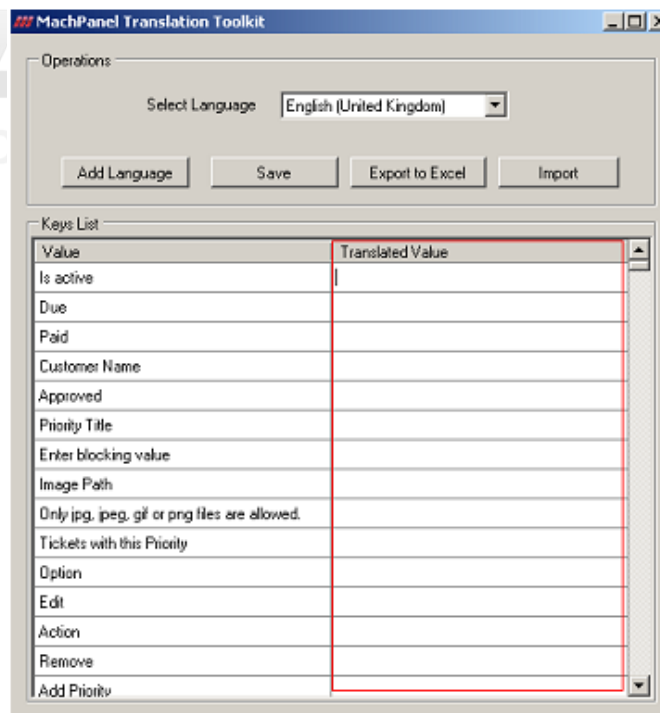

Step 2: Click on **Add Language** button for including your desired language in which you wish to translate. Simply, select your desired language from the drop down menu and click **OK**.

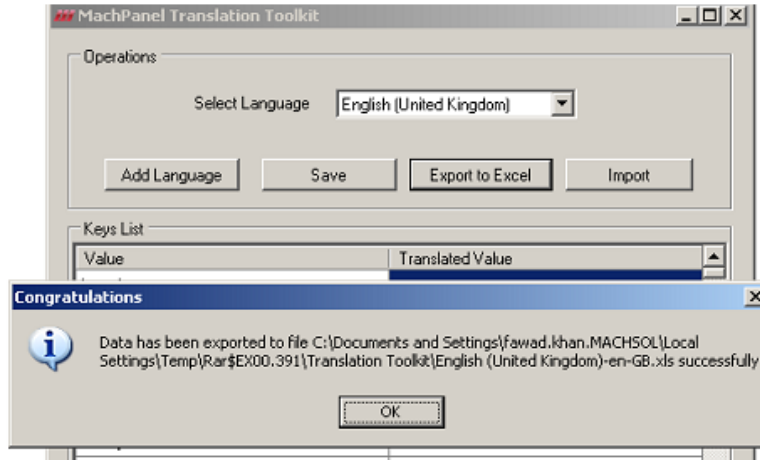

Step 3: Start translating by filling the "Translated Value" column. Click **Save** once you are done.

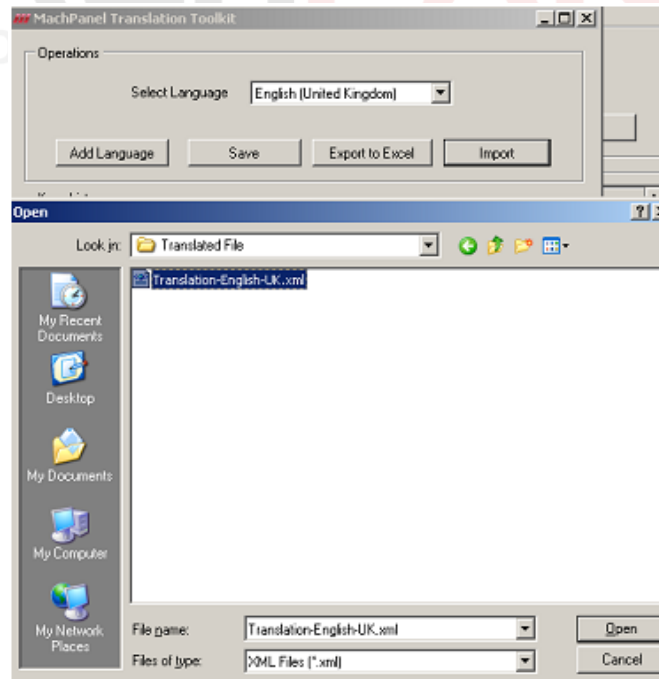

How to Export to Excel

You can export translated saved file to an Excel sheet by clicking on **Export to Excel** button. This is quite handy if you want to work on the same translated file later on (by using import feature) or if you did not complete the translation at first place.

Importing an XML file

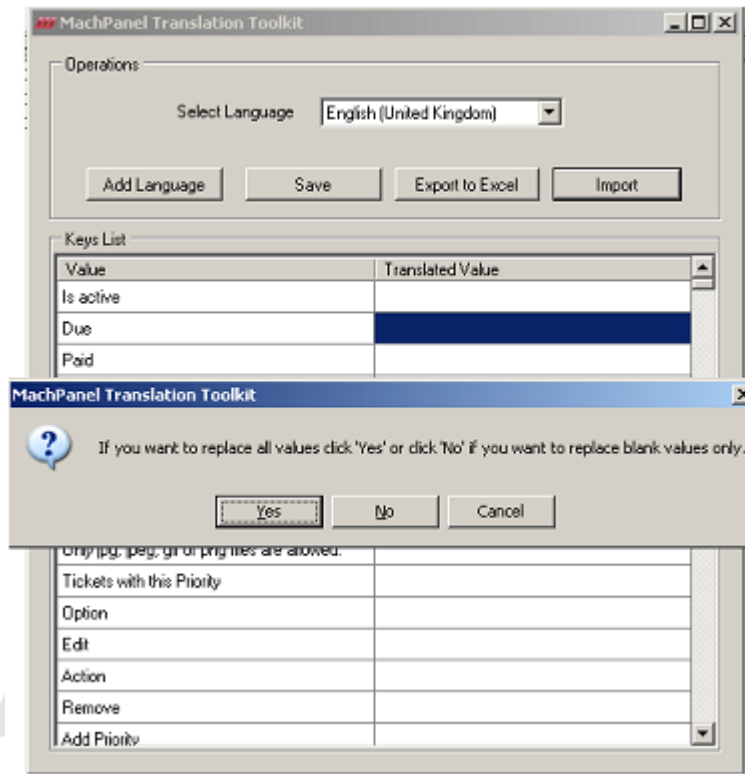

1. Click on **Import** button.

Copyright © 2010 MachSol Inc. Distribution of this content in any form is strictly prohibited and unlawful unless prior written permission is obtained from the copyright holder. All rights reserved.

2. Browse to file path. After selecting your desired XML translation file, click **Open**.
3. At the prompt, select your preference to continue with the operation.

And Viola! You are done with the translation activity.

Note: It may take several minutes to import the file depending upon the size of the translation file.
