Configure MachPanel To Run On Port 80 on a Customized URL

Summary

This article describes HOW TO Configure MachPanel to run on port 80 on a customized URL.

Applies To

MachPanel

Solution

Following steps elaborate, how to configure MachPanel to run on port 80 (instead of 786) on a customized URL. For example: http://cp.webhost.com, where webhost.com is your website name.

Steps

1. Open **MachPanel Configuration Studio.** Then go to the following navigation path in MachPanel Configuration Studio: **Configure >> Control Panel Website.**
2. Update following settings as per your requirement:

    *   **IP Address:** Select the **IP** for the website.
    *   **TCP Port:** Leave 80 as TCP port.
    *   **Host Header Name:** Enter your customized URL e.g. http://cp.webhost.com

3. Click on **Update Setting** button to finalize changes.

You have now configured MachPanel to run on port 80. Open browser, enter http://cp.webhost.com and you should see the login page.
