MachPanel Storefront Integration With Provider Website

Summary

MachPanel integration with your (Provider's) website allows your clients to have one control panel login once they have ordered products. They would buy say a domain and hosting package via MachPanel, set up payment and then be given a login to their control panel where it's all managed. Most of all, Provider does not has to worry about the look and feel part because MachPanel supports complete customization (themes, CSS) in this respect. It can easily customize the look and feel of the order form according to Provider's taste and need.

Applies To

MachPanel all versions
