

PayPal Integration

Summary

This document describes how to configure PayPal with MachPanel

Applies To

MachPanel all versions

Solution

Step 1: Browse PayPal site

IMPORTANT: You'll need to create an API username for PayPal, which is different from your PayPal username. Give the API username, password, and signature in the settings below. Follow these steps:

1. **Log in** to your **PayPal Business account**.
2. Click **My Account**.
3. Click Profile.
4. Under **Account Information**, click **API Access**.
5. Click **Request API Credentials**.
6. Click **API Signature**.
7. Click the **Agree checkbox**.
8. Click **Submit**.

Step 2: Configure PayPal as your payment gateway

To configure PayPal as your payment gateway, follow this:

1. Navigate to **Home » System Configuration » Providers » Payment Gateways**
2. Click on the **Configure** link and follow the instructions below:

- **Provider:** Shows the name of provider you are configuring (Not editable).
- **Enabled:** Select **NO** only if you want to disable the payment gateway.

PayPal Integration

This will prevent system from charging bills through this gateway.

- **Enable Test Mode:** Select **YES** if you want to perform test transaction. No credit card is charged in this case, so be careful.
- **API User Name:** Enter your **PayPal API username**.
- **API Password:** PayPal API password.
- **API Signature:** Enter your **PayPal** signature.
- **API URL:** Defaults to <https://www.paypal.com/cgi-bin/webscr?>. Leave it same.

Note: Please be careful, as the test mode and real mode API URLs and credentials (username and password) are different. So beware of the mode (test or real) and the credentials that you use.
