

## Remoting Exception: Exception Has Been Thrown By The Target Of An Invocation.

### Summary

This article entails steps how to resolve **Remoting Exception : Exception has been thrown by the target of an invocation.**

### Applies To

MachPanel

### Solution

To resolve this error please follow the steps given below:

#### **Step 1: Check MachPanel Provisioning Service**

The very first thing that needs to be checked is to see if the MachPanel Provisioning Service on remote server is running properly.

#### **Step 2: Allow communication on remote server on Port:7860**

The next thing to check is to ensure that communication on Port:7860 is allowed on remote server. Please check your firewall settings on remote server and ensure that Port:7860 is not blocked.

#### **Step 3: Follow installation guides**

Please follow the installation guides properly for successful deployment and **update to the same version** as that of Control panel. To successfully deploy services to be managed from MachPanel, you should consult the deployment guides at following link:

1. For New Exchange server you first need to install remote agent.
2. If you already have remote agent installed, you just need to update the remote agent.

Our product knowledge-base is constantly updated. If you encounter an error during installation and configuration, please search

<https://kb.machsol.com/Knowledgebase/50268/Update-MachPanel-Remote-Server-to-Latest-Version>

Remoting Exception: Exception Has Been Thrown By The Target Of An Invocation.

#### **Step 4: Adjust MachPanel Provisioning Service properties on remote server**

Please note that you have to adjust MachPanel Provisioning Service properties. Following points need your attention. All this has been explained clearly in installation guides already:

1. Please create **MPAdmin** on AD.
2. Give appropriate permissions to **MPAdmin** i.e. make it member of administrator group.
3. Go to **Run** and type services.msc
4. On **Services Manager** Go to properties of **MachPanel Provisioning Service**.
5. Click on **Log On** tab.
6. Select the option **This Account** and enter login/password of account created above i.e. MPAdmin and its password.

**Note:** The service account must have Read/Write/Delete (full access) on Remote Server folder and sub folders.
