

Configure MachPanel With Pre-Installed SharePoint

Summary

This article provides guidelines for integrating MachPanel with SharePoint, when SharePoint is already / previously installed.

Applies To

MachPanel all versions

Solution

An important thing to note is that SharePoint integration with MachPanel is successful only when MachPanel accesses SharePoint with same user through which SharePoint was installed.

In case you have already installed SharePoint then you must know which user was logged in during installation, then set this user as **Domain Administrator Login** by following the steps below. As an example we will use user name **Administrator2**.

Step1: Setting Up Domain Administrator Login

Domain administrator login: This will be the user responsible for connecting with Active Directory.

In your MachPanel Control Center, Navigate to **Home » Service Director » Active Directory Domains**

Step2: Domain Administrator Login Permissions

Since the same Domain User (administrator2) which is being used for MachPanel and SharePoint integration will also be used for Standalone Exchange so it must be member of certain groups for Standalone Exchange. To do this, please do the following:

1. Click **Start**, point to **Settings**, click **Control Panel**, double-click **Administrative Tools**, and then double-click **Active Directory Users and Computers**.
2. In the console tree, click **Users**.
3. In the **details** pane, right-click the user (administrator2 that was set in MachPanel) and then click **Properties**.
4. Click on the **Member of tab** to check that this user (administrator2) has following permissions:

Configure MachPanel With Pre-Installed SharePoint

- Domain Admins (Set Primary)
- Domain Users
- Enterprise Admins
- Exchange Servers
- Exchange Organization Administrators
- Group Policy Creator Owners
- Schema Admins

This will ensure that both your SharePoint and Exchange integrations work through a single user.
