Steps to Register DLL in Windows

You have to register LogParser.dll file on both the MachPanel Control Server and the Hostmatic Remote Server.

To register the DLL in Windows, you need to run a command. Click Start -> Run. Enter regsvr32 "pathdllname.dll".

- In case Control Server the path will be as follows:

```
regsvr32 "C:\Program Files\MachSol\MachPanel Control Server\bin\LogParser.dll"
```

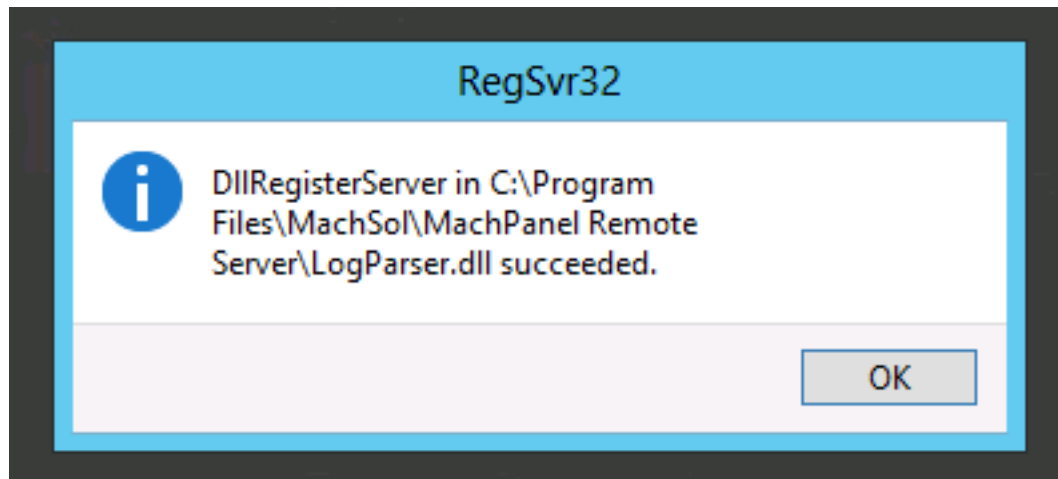

Registering LogParser.dll for Hostmatic

- In Case of Remote Server the path will be as follows:

```
regsvr32 "C:\Program Files\MachSol\MachPanel Remote Server\LogParser.dll"
```

After the successful registration the following message will be displayed:
