

Public Folder Hierarchy Handling

Summary

This article provides a summary on how to handle public folder hierarchy of MachPanel Control Panel.

Applies To

This article applies to MachPanel build v5.1.11 **HF1** and above.

Public Folder Hierarchy of MachPanel Control Panel:

To handle public folder hierarchy, please create following keys in registry **Software\MachSol\MachPanel** on MachPanel Control Server only.

String entry Name: PFRoot

Value: \

String entry Name: PFOrgParentFolder

Value: domain

* [**Value:** ou] can also be used as parameter so that Root Public Folder gets created same as OU name instead of domain name.

Here is a snapshot of registry for your reference:

Public Folder Hierarchy Handling

PFRoot can be any Public folder which you want to use as root folder through MachPanel. This way, a new public folder for each organization will get created under the root folder and then all new public folders for that organization will get created under that organization public folder.
