Summary

This article provides information about proxy handling in MachPanel control and remote servers.

Applies To

This article applies to MachPanel v5.2.10 and above.

Procedure

Download the **ProxyFix.zip** file from the attachments.

Web Proxy Handling:

Edit ProxySettings.reg file, specify following details, copy reg file on Control and each Remote Server and Execute to update Registry settings.

1. **ProxyURL** = http://IP:Port ; Leave this setting blank if proxy is not used.
2. **ProxyRequiresAuthentication** = 1 for True, 0 for False.
3. **ProxyUserName** = User Name for Proxy
4. **ProxyPassword** = Password for Proxy
5. **ProxyDomain** = Domain for Proxy, if standalone server and domain is not used, leave blank.
