This article provides a summary on how to add Web Hosting Services in the Hostmatic Server.

Applies To

This article applies to 5.2.10 and onwards.

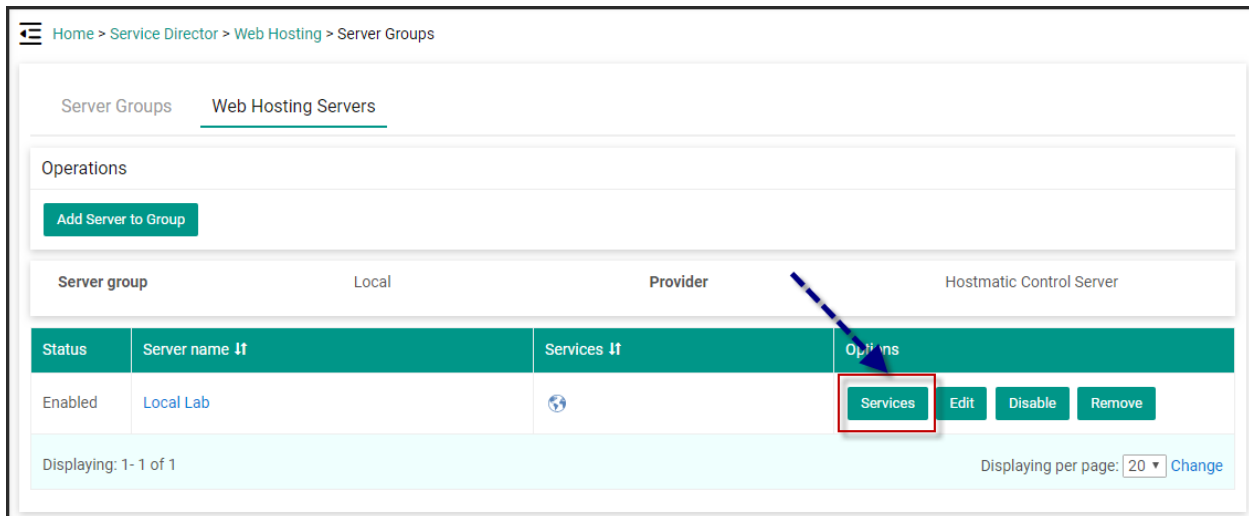

Pre-Requisite

Integrate Shared\WebHosting server as per details on the following KB article:

<http://kb.machsol.com/Knowledgebase/Article/50283>

Add Services to Webhosting

To add Web Hosting Services in the Hostmatic Server, click **Services** in the options menu against the desired server. then click on **Add Service** button.

From the **Service** drop down menu, select the Service you want to add.

Adding Services to Shared \Web Hosting

- To add **IIS Service** to your Hostmatic server, select **Web** from the drop down list. Now, select appropriate **Provider** for IIS service and provide necessary details. See the snapshots below:

| Server Settings | |
|--------------------------------------|--------------------------------|
| Provider: | Internet Information Server 10 |
| Friendly name: | IIS 10 |
| *Anonymous user group name: | MachPanelWebUsers |
| *Websites physical path: | C:\inetpub |
| *Websites data folder name: | www |
| *Website log file folder name: | logs |
| *Websites database folder name : | Database |
| Disable IIS Logging (For Domain(s)): | <input type="checkbox"/> |
| Enable Shared SSL: | <input type="checkbox"/> |

| | |
|------------------------------|-------------------------------------|
| Enable Shared SSL: | <input type="checkbox"/> |
| *Shared SSL website id: | 0 |
| *Shared SSL website name: | |
| Enable Temporary URL: | <input checked="" type="checkbox"/> |
| *Temporary URL Website ID: | 12 |
| *Temporary URL Website Name: | Temporary Url |

| IIS Management | |
|-------------------------------|---|
| *Default documents list: | default.html,index.aspx,default.asp,index.asp,default.aspx,default.htm,index.html,home.htm,index.php,index.pl,index.py,default.php,default.pl,default.py,index.cfm,default.cfm,home.cfm |
| Hostheader prefixes: | www,www2,www3 |
| *PHP 4.x CGI executable path: | %SYSTEMDRIVE%\Php\php-cgi.exe |
| *PHP 5.x CGI executable path: | %SYSTEMDRIVE%\Php\php-cgi.exe |
| *Python executable path: | %SYSTEMDRIVE%\Python\python.exe |
| *Perl executable path: | %SYSTEMDRIVE%\Perl\Bin\perl.exe |

Adding Services to Shared \Web Hosting

- To add **FTP Service** to your Hostmatic server, select **FTP** from the drop down list. Now, select **Provider** for the FTP service and provide necessary details. See the snapshot below:

This screenshot shows the 'Server Settings' form. The 'Provider:' dropdown is highlighted in yellow and set to 'Microsoft FTP 7.5 Server (Windows 2008 or Window...'. The '* Friendly name:' field is set to 'Microsoft FTP 7.5 Server (Windows 2008 or Window...'. Below this is the 'FTP Server Settings' section with fields for '*FTP users group name:' (set to 'Folder') and '*Default FTP Domain:' (set to 'Default FTP Site'). A note next to the domain field says 'Provide default FTP site name that hosts virtual FTP domains.' At the bottom are 'Save' and 'Cancel' buttons.

This screenshot shows the 'FTP User Name Rules' section of the form. It includes fields for '*Maximum user name length:' (set to 12) and '*Minimum user name length:' (set to 6). Below this is the 'DNS Records' section with a dropdown for 'Apply DNS template:' (set to 'FTP Service DNS Template'). At the bottom are 'Save' and 'Cancel' buttons.

Adding Services to Shared \Web Hosting

- To add **MailEnable\SmarterMail** service to your Hostmatic server, select **Mail** from the drop down list. Now, select **provider** for the mail service and provide necessary details. See the snapshot below:

The screenshot shows the 'Services' configuration page in Hostmatic. The 'Server group' is 'WebHosting Server Group Ess2019'. Under 'Add Service', the 'Service' dropdown is set to 'Mail'. In the 'Server Settings' section, the 'Provider' dropdown is set to 'MailEnable' (highlighted in yellow), and the '*Friendly name' is 'MailEnable'. The 'Account Limits' section has empty input fields for '*Maximum mailboxes' and '*Current number of mailboxes'. The 'DNS Records' section has '*Apply DNS template' set to 'None'. At the bottom, there are 'Save' and 'Cancel' buttons.

- To add **Database Service** to your Hostmatic server, select **Database** from the drop down list. Now, select **Provider** for the database service and provide necessary details. See the snapshots below:

The screenshot shows the 'Services' configuration page in Hostmatic for a Database service. The 'Server group' is 'WebHosting Server Group Ess2019'. Under 'Add Service', the 'Service' dropdown is set to 'Database' (circled in blue). In the 'Server Settings' section, the 'Provider' dropdown is set to 'SQL Server 2016' (circled in red), and the '*Friendly name' is 'SQL Server 2016'. The 'SQL Database Settings' section includes: '*Database server (Name\Instance):' set to '(local)', '*Admin username:' set to 'sa', '*Admin password:' (empty), '*Database location (in case of remote):' set to '%SYSTEMDRIVE%\Databases', '*Database collation:' set to 'Default', and 'Default user role:' set to 'db_owner'.

Adding Services to Shared \Web Hosting

Important Note: For MySQL 5.7 Latest version of MySQL ODBC connector is 5.3, it is must to install "Microsoft Visual C++ 2013 Redistributable" package.

- To add **DNS Service** to your Hostmatic server, select **DNS** from the drop down list.
- Now, select **Provider** for the DNS service and provide necessary details. following providers are supported:

Home > System Configuration > Providers > DNS Server

DNS Server

| Provider | Integration Status | Status |
|-----------------|--------------------|---------|
| Microsoft DNS | Stable | Enabled |
| Simple DNS Plus | Stable | Enabled |
| Power DNS | Stable | Enabled |
