

Role-based access control (RBAC)

Summary

This article provides information on how to add Role-based access control (RBAC) in Exchange Hosting

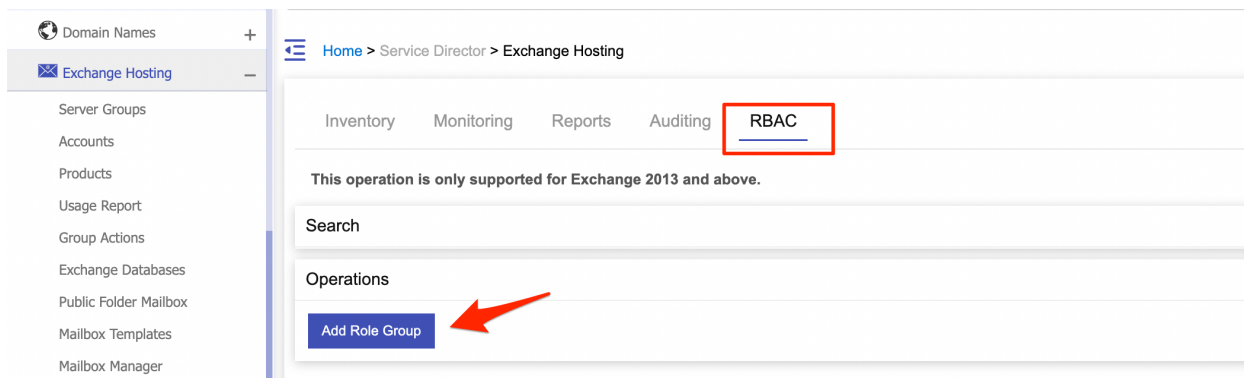

Applies To

This article applies to MachPanel build v6.1.30 and later.

Role-based access control (RBAC)

Role-based access control (RBAC) is a method of restricting network access based on the roles of individual customers within an enterprise. RBAC lets Customers have access rights only to the information they need to do their jobs and prevents them from accessing information that doesn't pertain to them.

- Navigate to the following Path: **Home > Service Director > Exchange Hosting > RBAC**
- Click **Add Role Group** as shown below:

Role-based access control (RBAC)

1. **Role Group Name:** Provide friendly Role group name.
2. **Select organization:** Select Organization.
3. Select **Roles**.
4. Select **Members**.

The screenshot shows a web interface for selecting members. It features a search bar at the top with the text "Type to search". Below the search bar, there are two columns: "Selectable" on the left and "Selected" on the right. The "Selectable" column is currently empty. The "Selected" column contains three entries: "alpha - alpha@mailcloud.local (Mailbox)", "bravo - bravo@mailcloud.local (Mailbox)", and "charlie - charlie@mailcloud.local (Mailbox)". Between the two columns are four blue buttons: a right arrow, a left arrow, a right arrow, and a left arrow. At the bottom left of the interface are two buttons: "Save" and "Cancel".

- Click **Save** when done.
