Overview

MachPanel's Microsoft CSP / Office 365 Module is the only management software that completely wipes out the complexities in Office 365 management by its unified approach. It allows you to significantly reduce your time to manage users, groups, contacts and manipulate plenty of settings via single interface. It is simple, fast and consolidated admin center that allows you to perform numerous action at a time without waiting for any previous one to be completed.

CSP Secure Application Model introduced as a secure framework for authenticating Cloud Solution Provider (CSP) partners and Control Panel Vendors (CPV) using multi-factor authentication (MFA) by Microsoft, will elevate security for operations involving the Partner Center API. This model helps to protects the partner's infrastructure and customer data from security risks.
