

ADSync Utility Update to v4.3

Summary

This article provides information on how to update ADSync tool to latest v4.3.

Applies To

This article applies to ADSync v4.2

ADSync v4.3

ADSync v4.3 works with MachPanel 6.3.12 or later. To upgrade you need to perform following steps on each Domain Controller in Local AD.

For details about changes in build 6.3.12, please visit release

notes <https://kb.machsol.com/Knowledgebase/55615/MachPanel-Build-v6312-Release-Notes-Dec-10-2019>

You will be able to perform update of your control panel server to 6.3.12 and schedule your ADSync customers to perform update to 4.3 at a later time. During this version mismatch between ADSync and MachPanel where **ADSync is on version 4.1 or 4.2** and MachPanel is on **version 6.3.12** the Sync Process will continue to work. **Though this will work, but it is recommended to update ADSync clients to version 4.3 as soon as possible.**

IMPORTANT: This version of Adsync supports latest TLS encryption protocols i.e. TLS1.1 and TLS1.2 are supported.

Procedure To Update:

a. Auto update: If you want to auto-update, please run **ADSync.UpdateInstaller.exe**, please use "Run as Administrator" option.

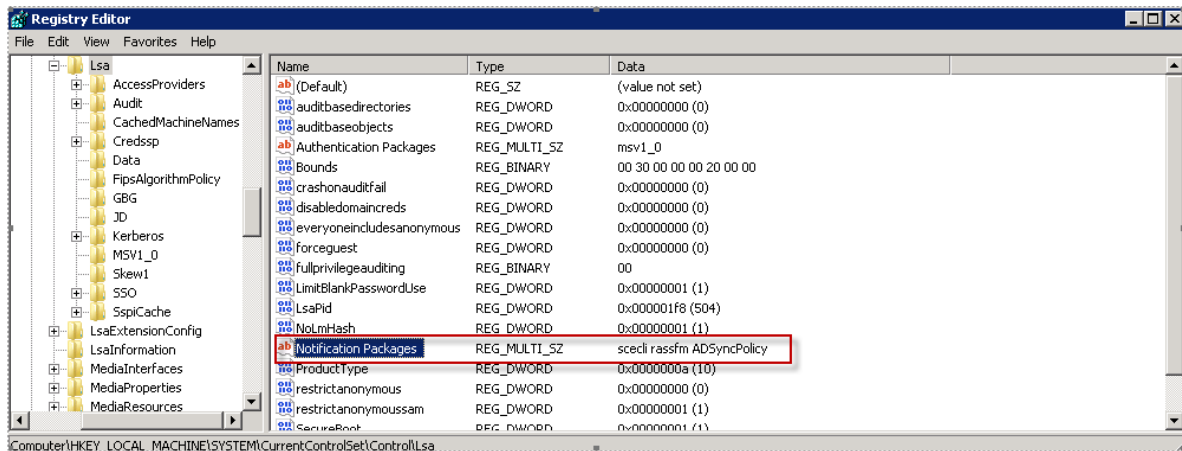

Also, you need to manually run registry file (ADSync.PolicyLogger.reg) from update directory once update process is completed.

b. Manual update: To update manually please follow below steps.

1. Remove entry "ADSyncPolicy" from
"HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\LSA\Notification

ADSync Utility Update to v4.3

Packages".

2. Reboot Domain controller.
3. Replace "ADSyncPolicy.dll, ADSync.PolicyLogger.dll and ADSync.ClientHelper.dll" files in "\$windir\System32".
4. Stop ADSyncSvc using Services.
5. Replace "ADSync.ClientHelper.dll, ADSync.ConfigStudio.exe and ADSyncSvc.exe" in installation folder of ADSync

Example "C:\Program Files\MachSol\ADSync".

6. Add entry "ADSyncPolicy" to "HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\LSA\Notification Packages".
7. Double click or run "ADSync.PolicyLogger.reg" file to update the linked assembly version in windows registry.
8. Reboot the machine.
9. Repeat Step1-8 for all additional/secondary/backup domain controllers.

Known Issue:

If your panel is on build 6.2.10 and you updated your ADSync Tool to v4.3, you need to execute following script on Control Panel Database:

```
insert Into [Hb_tblADSyncVersionMapping] (ADSyncVersion, CPVersion)
Values ('4000','6210'),
('4100','6210'),
('4200','6210'),
```

ADSync Utility Update to v4.3

('4300' , '6210')
