

# Dedicated PFM Error due to special character

## Summary

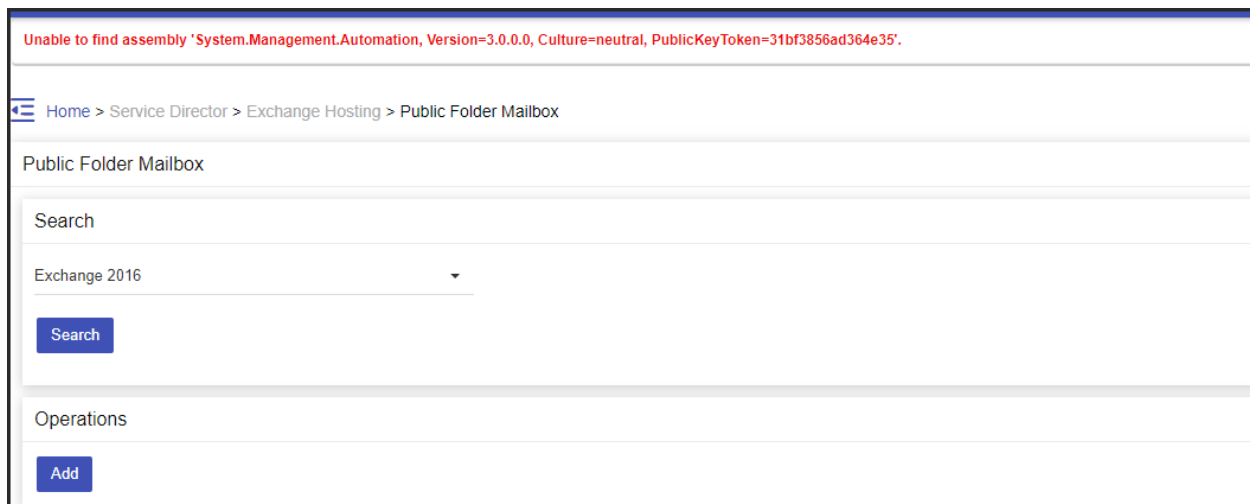

This article provide details how to resolve error when creating dedicated PFM from MachPanel in case of of special characters in OU name like ü.

## Applies To

This article applies to MachPanel build version 6 and above.

## Error Message

Error creating Dedicated PFM : **Unable to find assembly 'System.Management.Automation, Version=3.0.0.0, Culture=neutral, PublicKeyToken=31bf33856ad364e35'**

## In Exchange\_ logs the error is:

Dez-17-2019 12:07:00 : Error processing command: Cannot convert 'somedomainürPFM@somedomain.com' to the type 'Microsoft.Exchange.Data.ProxyAddressCollection' required by parameter 'EmailAddresses'. The address 'somedomainürPFM@somedomain.com' is invalid: "somedomainürPFM@somedomain.com" isn't a valid SMTP address. The domain name can't contain spaces and it has to have a prefix and a suffix, such as example.com.

## Dedicated PFM Error due to special character

Dez-17-2019 12:07:00 : CommandDetails: set-mailbox -publicfolder -identity "somedomainür PFM" -emailaddresses "somedomainürPFM@somedomain.com" -confirm:\$False

### Reason

Email addresses "**somedomainürPFM@somedomain.com**" is the main issue.

This is populated automatically when creating DEDICATED PFM because OU name is **somedomainür**

ü should be **ue**

somedomainürPFM => somedomain**uer**PFM

### Resolution

To resolve this, create Shared PFM and assigned only to 1 (concerned) organization. You will get option to type in name of shared PFM where you can enter somedomainuer (as per example used in this KB).
