

Details on Threads running under Threads Manager

Summary

This article provides information about the threads running through MachPanel.

Applies To

Applies to MachPanel v7 and above.

Threads Details

In MachPanel, a thread is a process used to perform tasks concurrently. Threads within the MachPanel Control Server handle operations like:

- Provisioning new services
- Communicating with remote agents (e.g., Hyper-V, Exchange, etc.)
- Processing background jobs (e.g., usage reports, license updates)
- Performing scheduled tasks

To see the Threads, Navigate to **Service Director > General > Threads Manager**:

Logging Enabled	Server IP	Thread Name	Service Name	Status	Time Interval in Seconds	Last run	Options
<input checked="" type="checkbox"/>	[REDACTED]	ADSyncWork	MachPanel Provisioning Service	Queued	30 Seconds	18-5-2024 3:26:10	☰
<input checked="" type="checkbox"/>	[REDACTED]	AutoAddUsersInSecurity GroupWork	MachPanel Provisioning Service	Queued	1 Minutes	18-5-2024 3:26:10	☰

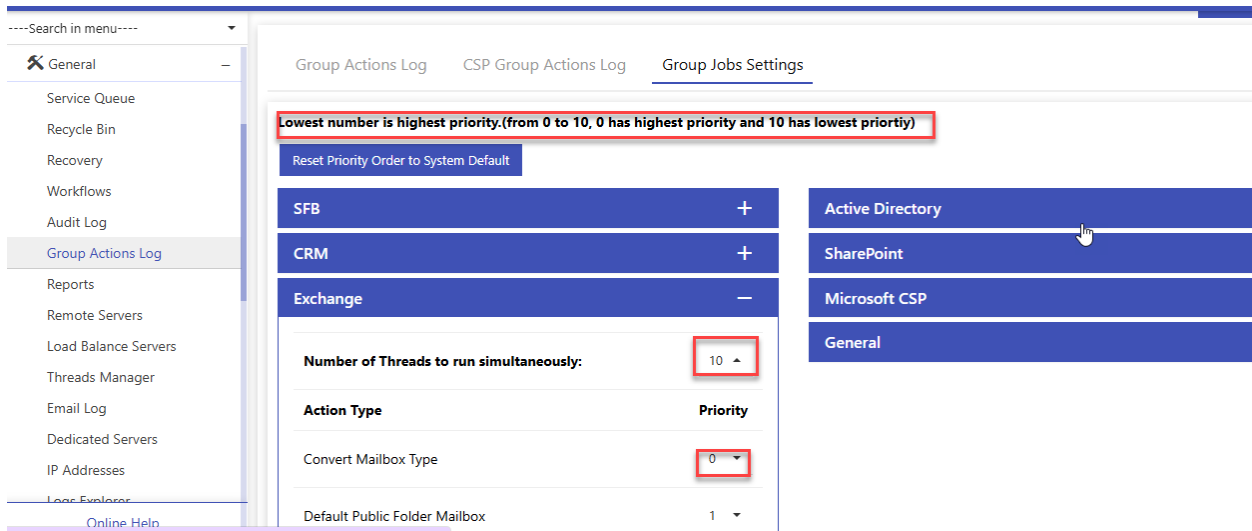

Under this interface it allows you to:

- Enable Logging

Details on Threads running under Threads Manager

- o If checked, logs will be generated for the relevant thread on your MachPanel Control Server Logs folder (**C:\Program Files\MachSol\MachPanel Control Server\logs**)
- Update Time Interval.
- From the option you can 'Run' or 'Disable'.

You can also update number of threads to run simultaneously by navigating to **Service Director > General > Group Actions Logs** and then click **Group Job Settings**. Here you can increase the number of threads to run simultaneously and also you can set the priority of jobs as well (Lowest number is highest priority.(from 0 to 10, 0 has highest priority and 10 has lowest priority).

Below table provides information about the threads and its relevant tasks running under Threads Manager (**Service Director > General > Threads Manager**).
